

Conservatory ROOF CONVERSIONS

www.ultratherm.com

☎ NI 028 9072 6131

☎ ROI 01 2343 778

Your conservatory roof conversion will include the following:

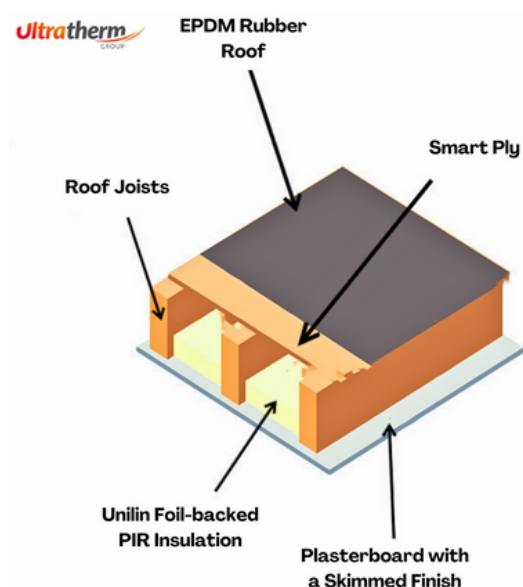

- **Reinforcement of the existing aluminium roof structure** to ensure strength and durability.
- **75mm PIR insulation** installed between the rafters for exceptional thermal efficiency.
- **62.5mm insulated plasterboard** fitted beneath the rafters for added insulation.
- **External roof construction** featuring T&G smartply cladding and EPDM rubber with trims
- **New fascia backing boards** and **uPVC fascia** for a fresh, polished look.
- **Over-fascia ventilation** to maintain airflow and prevent condensation.
- **New gutters and downpipe** for effective rainwater management.
- **Skimmed plaster ceiling finish** for a smooth, professional appearance.
- **Energy-efficient LED ceiling lights** to brighten your space.
- **Complete cleanup**, including removal of all related rubbish and debris.
- **20-year guarantee** on EPDM rubber for peace of mind.
- **10-year workmanship guarantee** ensuring our high-quality standards.

What is an EPDM roof?

An EPDM roof refers to a type of roofing system that utilizes EPDM (Ethylene Propylene Diene Monomer) as the primary roofing material.

EPDM is a synthetic rubber compound known for its excellent durability, weather resistance, flexibility and is best suited to flat or lean-to roofs which cannot be raised further.

The design of your EPDM Lean-to roof

A lean-to conservatory is an architectural structure typically attached to your home's wall, featuring a flat or slanted roof angled away from the main structure.

EPDM Rubber

The rubber roof is suited to roof designs that have a very low pitch

Lead Flashing

Lead flashing is an important feature of any roofing system because it prevents water from entering the structure through a joint.

Ring Beam

The ring beam serves to reinforce the roof structure, thus distributing the load evenly across the room.
